

PETRIK LABORATORIES, INC.

CompoStar™

CompoStar is a nonpolluting and ecologically sound compost starter available as a liquid or dry powder. CompoStar produces a compost that will feed both the soil and the plant without depleting nitrogen from the soil. CompoStar can help in meeting EPA composting requirements.

CompoStar Advantages

Helps to meet EPA requirements

- reduces runoff
- evens out temperatures
- reduces pathogens

Shortens composting time

- directed microbial growth
- fast digestion of hard to decompose items

Even temperatures

- even finishing
- reduce risk of contaminants

Produces high quality compost

- low loss of nitrogen
- low C:N ratio
- high content of humic and fulvic acids
- high amount of chelating compounds
- reduces weeds

CompoStar's live microorganisms work as a team to assure a balance in compost metabolism producing high amounts of humus.

CompoStar effectively composts hard organic wastes such as cotton gin trash, olive cake, wood chips, rice hulls, and wine press waste.

CompoStar
The number one choice
for composting
